Projects

Axonize (Planon Software Services – Java, React Js, MySQL)

Axonize product is IoT based solution. With this solution a normal building can be converted to smart buildings by constantly obtaining data from various sensors and devices. These data is useful in triggering events, alarms etc. All the devices in a particular building or area can be monitored lively. Configurable dashboards enables to view data from various entities and react accordingly.

VMedico (Personal Project - Java, Spring Boot, JSP, MySQL)

VMedico is a web application to integrate various patients, doctors, and laboratories. Patients have a facility to book appointments with doctors across various hospitals and testing Patient will get mail when the appointment is confirmed and a remainder mail on the day of the appointment. Patient has a facility to store various medical documents. Doctors can track the patient medical history through this web application.
